

FRICTIOLAB

Easy, intuitive micro-torque measurement

Modular micro-torque measurement

- + Control different types of micro-torque
- + Fast and easy control solution
- + Flexible, configurable measurement cycles
- + Torque and position control cycles

▶ INSPECTION EQUIPMENT

▶ Special machinery

▶ Aging process

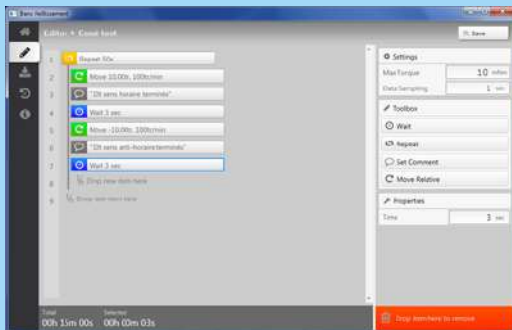

▶ Watchmaking tools

**Modular apparatus
ensuring simple use for measuring
and control micro-torque**

Static torque sensor

Rates		Precision
100 mNm	10'000 g.mm	< 0.1 % (100 µNm - 10 g.mm)
50 mNm	5000 g.mm	< 0.1 % (50 µNm - 5 g.mm)
20 mNm	2000 g.mm	< 0.1 % (20 µNm - 2 g.mm)
5 mNm	500 g.mm	< 0.1 % (5 µNm - 0.5 g.mm)

Flexible and user-friendly software

**Interchangeable fitting system for
quick series change**

**Adjustment for perfect coaxiality of the
fitting in front of the driving axis**

Specifications

- > Touch screen for fast measurement data acquisition
- > Configurable recording of various measurement data
- > Exportable data in .txt format (min, max, average, delta torque)
- > Min and Max torque setpoints
- > Binary result OK / KO
- > Motorized measurement cycle with position (number of revolutions) and speed (rpm) parameters
- > Flexible, intuitive software allows creation of any type of cycle
- > An X/Y precision slide and double goniometer assembly enables rapid adjustment of component and drive axis coaxiality.
